# Yale the world's favorite lock

# culture of innovation

# The Yale Heritage: Lock innovations since 1865

In 1865, Linus Yale, Jr. of Salisbury, New York, patented his most important invention, the Yale cylinder lock and key system that was to make Yale a household name. Inspired by basic principles first used by the ancient Egyptians 4,000 years before, the new type of lock applied a simple yet ingenious approach that has positioned Yale as the world's favorite lock brand.

Yale's European history began in 1904 when Yale established operations in London, Paris and Hamburg, with manufacturing starting a few years later in England, and a few decades later in Italy.

# unlocking the future

The Yale mark is a promise of quality. Yale padlocks are for life-for every type of situation, and for a lifetime of high performance.

# A global knowledge pool

Linus Yale's spirit of innovation lives on in the Yale brand today. Everyone in the company recognizes that a great deal of effort goes into maintaining a number one position. It is only constant innovation that allows the highest quality products to be available to everyone. Our vision at Yale is to build on our heritage and energize it with new knowledge for the future.

Yale's new padlock range demonstrates the brand's dedication to applying the latest insights in usability, sustainability, materials and production methods to offer some of the highest quality and most secure padlocks on the market today – and tomorrow, the world over.

# the new Yale padlock range

# Perfection reinvented

It may seem like an impossible task to improve on an object that has already been a part of our lives for generations. But with new developments in design innovation, materials and changing end user needs, Yale applies new insights into production techniques to make its products as user-friendly and as secure as possible.

As the world changes, Yale locks evolve. Whether in extreme conditions, outdoor or indoor, the new Yale padlock range offers universally relevant locking solutions to survive years of use in all types of environments.

# **Extreme Environments**

The Extreme/Marine Series offers some of the highest security padlocks available. These locks are serious heavy-duty gear tough enough for industrial or commercial use. Thicker protective bodies, smooth design, and attack-resistant protective shrouds mean these locks will survive some of the most challenging conditions on earth, such as prolonged exposure to wetness, salt, sub-zero temperatures, heat and rapid temperature changes, as well as various forms of attack.

The Extreme/Marine Series rates between 7 and 10 on the Yale security rating scale, offering maximum security corrosion and attack resistance.

# Yale<sup>\*</sup>

# Extreme Environments

Molybdenum has unique characteristics that add to the strength and durability of stainless steel. It has been proved extremely reliable in critical situations such as in the nuclear, defense and space industries where the slightest risk of corrosion would be catastrophic.

No. of keys: 3
Security grading: 7
Corrosion rating: Exposed

These padlocks offer general security for both indoor and outdoor conditions. Tough satin chrome-plated finishes and Boron shackles maximize corrosion and security resistance ratings. Smooth rounded forms also increase resistance to attack.

These locks are, at the very minimum, rated between 4 and 6 on the Yale security rating scale.

# **Outdoor Environments**

Boron is a high-grade precision steel. Due to its supreme strength it is used in advanced automotive applications and in heavy-duty industrial applications.

# General Security

These padlocks offer basic security features for indoor and general applications. New satin brass finishes and smoother rounded forms protect the things to be secured. They are built to act as deterrent to petty theft, or even for use as a personal security measure. Although designed to provide basic security, they are built to the same exacting quality standards as the more robust members of the Yale padlock family.

Re-settable combination locks allow the lock to remain a household favorite no matter whom it is passed on to.

# Padlock Accessories

Yale padlock and hasp combination packs are designed to make the consumer purchase process quicker and easier. Each pack is independently tested and graded with the unique Yale strength rating system - featuring security and corrosion performance tests.

Yale hasps are designed with ease of installation and good performance in mind. They are suitable for security gates, sheds, cupboards, tool boxes and other similar applications. A quality hasp is as important as the padlock and so as your valuables.

# designed from the inside out

# **Anticipating needs**

Design is more than just surfaces. It's about quality, from the inside out. Yale's design philosophy is to create the highest quality security products possible that are relevant and respond to every individual's changing needs,

The new Yale padlock range introduces a new enhanced design that is soft to touch, hold, and behold, and designed to resist some of the hardest physical impacts. Each product has the maximum strength, security, usability and the corrosion performance for its specific use. Each padlock is designed to enable the people to effortlessly secure themselves, their loved ones and their possessions for generations. Designed to meet evolving needs, as well as the toughest challenges of life.

# **Key features**

All Yale padlocks contain the precision locking mechanism that helped make Yale the world's favorite lock. The latest insights apply key features exactly where they are needed for the most effective user application.

Advanced design Innovative design raises performance ratings. Integrated body shoulders, rounded forms, increased body thickness, satin finishes, and rubber covers, help protect the lock from attack and corrosion.

All locks contain precision-locking mechanisms that help make Yale a household name. Six-pin cylinders raise security levels and allow the padlock to be keyed in the same way as your front door lock.

Yale locks are designed to survive our changing needs, as well as attack from man or nature's forces. All padlocks in the new range come with a lifetime warranty.

Convenience
Convenient features such as the re-keyable cylinder means the locks can be kept even if all keys are lost.

Usability
The padlocks come in their most efficient forms. Multiple padlocks on one key result in easy user-management.

Patented flexibility
The patented Yale quick-change shackle system allows the shackle to be replaced with ease, for trouble-free resizing or replacement.

Material knowledge
Materials are treated and applied to
withstand some of the toughest corrosion
tests in the industry.

Extra security

Double ball locks on both sides of the shackle are an example of where security features are added where they are most needed.

# the highest global standards

# The toughest tests

Yale employs some of the toughest security and performance testing processes in the industry and is a leading contributor to international standards development. These tests are more severe than would normally be encountered in real life. Varying methods of simulated extreme attack assess the padlock functionality and their ability to survive the worst-case scenarios of attack utilizing common hand tools.

# Performance testing and the Global Yale Standard

The Global Yale Standard enables the most stringent evaluation of security and corrosion resistance of padlocks. The standard specifies performance requirements and describes test methods for strength, security, function and performance.

# Security rate testing with simulated attacks

The Global Yale Security Level tests simulate various forms of extreme attack with common hand tools. The tests are far more severe than would normally be encountered, maximizing impact of pulling, twisting, cutting, impacting, sawing, drilling or cylinder manipulation.

# Corrosion resistance

All Yale padlocks are exposed to accelerated corrosion tests to evaluate their resistance to corrosion. Testing includes long term exposure to damp, humid, wet and extreme conditions, including low temperatures and salt spray.

# **Durability testing**

All Yale padlocks locking mechanisms and cylinders that are run through thousands of cyclic tests, simulating years of daily use.

# **Engineered security**

Yale padlocks are designed to resist various forms of attack.

Anti crop
Built-in protection
against cropping.

Anti drill Hardened protection against drill attack.

Anti impact
Built-in protection
against impact.

Anti saw Hardened protection against saw attack.

# Yale performance ratings

# **Security strength ratings**

Yale padlocks are divided into three security levels, blue, green and red, to help consumers choose the correct lock for their needs. The grading bar identifies the lock's suitable application and security on a rating between 1 and 10, and is visible on all padlock packaging and merchandising.

# **Security Ratings**

# Basic

Blue

The blue level contains the basic security locks that offer basic indoor and outdoor barrier and deterrent protection. These locks are rated 1-3.

# General Green

The green level includes the general security locks that offer good to high security for general purpose outdoor use. These are marked 4-6 in the Yale Global Performance Rating.

# High Red

The red level includes the high security locks that offer high to maximum security for all applications including industrial and commercial for extreme or marine use. These padlocks are Yale certified 7 to 10.

# **Corrosion resistance ratings**

All Yale locks and accessories are exposed to accelerated corrosion tests to evaluate their resistance to corrosion. The scale outlined below helps consumers determine the most appropriate padlock to use for their specific application.

The basic security padlocks cover both indoor and outdoor use, the general security padlocks covers outdoor and exposed, whereas the padlocks in the high security range are suitable for exposed and extreme conditions.
